

RPA (Robotic Process Automation)

Cost-effective and precise processes

The Challenge

Businesses require more and more repetitive processes. Examples include recording invoices, processing leave requests or managing orders. These tasks require significant human resources and, because of the human factor, are prone to errors and generate significant costs. Moreover, monotonous work also reduces employee satisfaction.

Process automation, which is particularly suited to automating repetitive, low added-value processes that are performed manually, is therefore becoming increasingly important.

The Solution

We use the most popular RPA tools to automate our customers' processes, always choosing the most suitable solution for the task at hand:

- UiPath
- BluePrism
- Automation Anywhere
- Microsoft Power Automate (formerly Flow)

Key Benefits

- Efficiency gains: less room for error, easy scalability, continuous operation
- Fast implementation: no need for custom software development and integration of different systems, API development
- Financial benefits: reduced operational costs and rapid payback (as fast as within a year)
- Increased employee satisfaction

Our Experience

With these RPA solutions, we have implemented several successful application development projects in recent years, with significant labor and cost savings, such as:

- We have automated the processing of incoming invoices for our client in vehicle manufacturing (using Automation Anywhere and Power Automate) - this has resulted in a 90% time saving in the processing of incoming invoices
- For our major client in banking, we automated the regression testing of complex systems we developed (using UIPath) - so that full regression testing can be completed in a single night instead of 2-2.5 weeks

About DSS

Ever since its foundation, DSS Consulting has specialized in business intelligence systems, custom software development and testing. We are proud that our company has pioneered data analysis, data quality assurance and data mining in Hungary. Later on, we also added industrial digitalization services to our portfolio, effectively supporting our clients' digitalization efforts in the industrial sector, in addition to the financial, insurance and telecoms sectors. Thanks to our experience of more than 25 years, as independent consultants, we have been focusing on choosing the best solution to each challenge that our customers deal with.
